## THE EMPLOYMENT SITUATION: FEBRUARY 2006

---

FRIDAY, MARCH 10, 2006

CONGRESS OF THE UNITED STATES,  
JOINT ECONOMIC COMMITTEE,  
*Washington, DC.*

The Committee met, pursuant to notice, at 9:30 a.m., in room 2212, Rayburn House Office Building, Hon. Jim Saxton (Chairman of the Committee) presiding.

**Present:** Representative Saxton.

**Staff present:** Chris Frenze, Robert Keleher, Brian Higginbotham, Colleen Healy, Katie Jones, Chad Stone, Matt Salomon and Nan Gibson.

### OPENING STATEMENT OF HON. JIM SAXTON, CHAIRMAN, A U.S. REPRESENTATIVE FROM NEW JERSEY

**Chairman Saxton.** Good morning. Commissioner Utgoff, it is a pleasure to welcome you once again to testify before the Joint Economic Committee.

The economic figures released today reflect more good news for American workers. According to the payroll survey, 243,000 jobs were created during the month of February. The level of the diffusion index shows that job gains were widespread last month. According to the household survey, the unemployment rate at 4.8 percent was statistically unchanged.

The U.S. economy has created 5 million jobs since August of 2003. The strength of the economy since 2003 has led to sustained job growth and downward pressure on unemployment. The resilience and flexibility of the economy have overcome a number of serious shocks, most recently the hurricanes of last year.

The pick-up in economic growth since 2003 is explained by a rebound in investment activity. The bursting of the stock market and technology bubbles in the first quarter of 2000 had exposed a lot of bad investments. These investments took years to liquefy and had a negative effect on investment. Falling investment was a drag on economic growth and undermined the early expansion period.

In 2003, the new policy mix caused a sharp rebound in investment activity. The combination of low interest rates set by the Fed, together with increased tax for investment, led to a sustained upward trend in investment that boosted economic and employment growth. The result is that the economic expansion is healthy, and the outlook is good.

In a recent policy report to Congress, the Fed noted that, quote, "The U.S. economy delivered a solid performance in 2005." Further-

more, the Fed observed that the U.S. economy should continue to perform well in 2006 and 2007. The Fed, along with a number of private and Government agencies, expects economic growth in 2006 to be about 3½ percent. The economic growth will continue to expand employment and further reduce unemployment.

[The prepared statement of Representative Saxton appears in the Submissions for the Record on page 8.]

**Chairman Saxton.** At this time I would like to ask unanimous consent that Senator Reed's statement be included in the record. He had fully intended to be here today, but another hearing on the Senate side, which was originally scheduled for 10, was moved forward to 9:30, so he will be unable to be here.

[The prepared statement of Senator Reed appears in the Submissions for the Record on page 9.]

**Chairman Saxton.** Commissioner Utgoff, we are ready for your testimony.

**STATEMENT OF HON. KATHLEEN P. UTGOFF, COMMISSIONER, BUREAU OF LABOR STATISTICS, ACCOMPANIED BY JOHN GALVIN, ASSOCIATE COMMISSIONER FOR EMPLOYMENT AND UNEMPLOYMENT STATISTICS; AND JOHN GREENLEES, ASSOCIATE COMMISSIONER FOR PRICES AND LIVING CONDITIONS**

**Commissioner Utgoff.** Mr. Chairman, I appreciate this opportunity to comment on the employment and unemployment data we released this morning.

Nonfarm payroll employment rose by 243,000 in February, and the unemployment rate was little changed at 4.8 percent. February's employment increase reflected gains in construction, mining, and several service-producing industries.

Within the goods-producing sector, construction employment increased by 41,000 in February following another sizable gain in January. Over the past 12 months, job growth in construction has totaled 346,000. In February, employment continued to rise in mining, mainly in support activities, especially for those for oil and gas operations.

Manufacturing employment overall was virtually unchanged in February. There were, however, offsetting movements in several industries. The largest job losses were in motor vehicles and parts and primary metals. Job gains occurred in machinery, petroleum products, and computers and electronic products. The manufacturing workweek and factory overtime each rose by 1/10 of an hour.

Over the month, financial activities added 22,000 jobs, reflecting increases in depository institutions and in insurance carriers. Health care employment expanded by 18,000, with continued growth in hospitals, doctors' offices and home health care. Professional and business services, private education, food services and drinking places, and government also had job gains in February.

Average hourly earnings for private production or nonsupervisory workers rose by 5 cents in February, following increases of 7 cents in both December and January. Over the year, hourly earnings increased by 3.5 percent. The average workweek was down by 1/10 of an hour in February to 33.7 hours.

Turning to data from the household survey, both the number of unemployed persons and the unemployment rate were little changed over the month. The number of persons employed for 27 weeks or more returned to its December level of 1.4 million after declining in January. These long-term unemployed constituted 19.0 percent of all unemployed persons, down slightly from a year earlier.

Total employment in the labor force continued to trend up in February. However, the employment-to-population ratio has held steady in recent months, and the labor force participation rate has shown little movement for about 2½ years.

This month we again report on the labor force status of survey respondents who evacuated from their homes due to Hurricane Katrina. The data are derived from a special set of questions that have been included in the household survey since October to gather information about evacuees. The estimates do not account for all persons who evacuated from their homes due to Hurricane Katrina. Information is not gathered on those evacuees who remain outside the scope of the survey, such as those currently living in hotels or shelters.

The February data indicate that there were about 1 million persons age 16 and over who evacuated from their August residences due to Hurricane Katrina. In February, about one-half of the evacuees were back in the homes they vacated in August. Among Katrina evacuees identified in February, 58.1 percent were in the labor force, and their unemployment rate was 12.6 percent. Unemployment rates were much lower for those evacuees who returned home than for those evacuees who had not.

To summarize February's labor market data, nonfarm payroll employment rose by 243,000, and the unemployment rate was little changed at 4.8 percent. Payroll employment has increased by 2.1 million over the year, and the unemployment rate is down by half a percentage point.

My colleagues and I would now be glad to respond to your questions.

[The prepared statement of Commissioner Utgoff, together with Press Release No. 06-396, appears in the Submissions for the Record on page 10.]

**Chairman Saxton.** Commissioner, thank you very much.

Commissioner, let me ask this question. You mentioned that there was a slight change in the unemployment rate. It actually increased from 4.7 to 4.8 percent.

**Commissioner Utgoff.** Yes.

**Chairman Saxton.** Is that a statistically significant change?

**Commissioner Utgoff.** No, it was not.

**Chairman Saxton.** Are there any special factors distorting or overstating the payroll job gains reported this month?

**Commissioner Utgoff.** No. We haven't identified any special factors.

**Chairman Saxton.** You mentioned Katrina a minute ago. Has the aftermath of Katrina continued to have some effect on the economy generally, or is that more of a regional phenomenon?

**Commissioner Utgoff.** I wouldn't know about the economy in general, but the unemployment rate in Louisiana is quite low, and

about half of the people who evacuated from their homes in Katrina have returned, and they have an unemployment rate of 4.8 percent.

**Chairman Saxton.** You mentioned that the evacuees who have not returned home have a higher unemployment rate; is that right?

**Commissioner Utgoff.** Yes; 22.6 percent.

**Chairman Saxton.** And they are in Houston and in other places?

**Commissioner Utgoff.** Yes.

**Chairman Saxton.** And continue to live in temporary housing?

**Commissioner Utgoff.** Yes.

**Chairman Saxton.** Does the current level of the diffusion index indicate that payroll job gains in February were fairly widespread?

**Commissioner Utgoff.** Yes, it does.

**Chairman Saxton.** Were there any sectors of the economy where job creation was significantly higher than others?

**Commissioner Utgoff.** In construction and in several service industries.

**Chairman Saxton.** You mention construction. Is that business construction or residential construction? Do you have those indicators?

**Commissioner Utgoff.** Most of the increase was in specialty trade.

**Mr. Galvin.** I think our analysis indicates most of the increase was in residential construction.

**Chairman Saxton.** I am curious. There has been some evidence of cooling in the real estate sector. Do your statistics shed any light on what is happening with real estate generally, real estate construction?

**Commissioner Utgoff.** As Mr. Galvin said, previous to this, most of the increase had been in residential construction, and last month it was in—much more in heavy construction. I should also note that for many months the increase in—there was a marked increase in mortgage bankers and brokers, and for the last 2 months we have seen a flattening of that.

**Chairman Saxton.** So your figures on residential construction would tend to bolster the notion that the real estate market has cooled some?

**Commissioner Utgoff.** The very limited evidence that we have would.

**Chairman Saxton.** January was the warmest January in recorded history, and some attributed the job growth in January to climatological factors, warm weather. Was there anything about February's weather that you can attribute to the very healthy job growth that we saw?

**Commissioner Utgoff.** There was a snowstorm in the Northeast, but it occurred on a Saturday and Sunday, and it was the kind of snow that was easily removable, so we didn't see anything in the data that would indicate that there were special weather factors in February.

**Chairman Saxton.** What do payroll job gains suggest about the strength of commission growth in the first quarter of 2006, which many forecasts expect to be strong? Are the payroll job gains consistent with solid economic growth?

**Commissioner Utgoff.** The payroll job gains are very consistent with solid economic growth. I can't predict what will happen for the rest of the quarter. There is 1 month left in the quarter.

**Chairman Saxton.** The last quarter of last year was weaker than we expected. Has there been any change in the rate of growth as measured by your statistics in the last quarter of last year?

**Commissioner Utgoff.** Compared to the first quarter of this year?

**Chairman Saxton.** No. The last quarter of last year was 1.6 percent GDP growth, and we expected that figure to be adjusted. Was there an adjustment?

**Commissioner Utgoff.** Yes, there was an adjustment. From the preliminary announcement of GDP to the revised announcement, there was an increase in measured GDP.

**Chairman Saxton.** Mr. Frenze tells me that it was adjusted from 1.1 percent to 1.6 percent. Is that correct?

**Commissioner Utgoff.** That is correct.

**Chairman Saxton.** Thank you.

Do you have any indicators as to what we can expect? Can we expect a rebound during the first quarter of this year?

**Commissioner Utgoff.** I can't predict that.

**Chairman Saxton.** OK. Thank you.

What can you tell us about the revisions in the recent payroll data?

**Commissioner Utgoff.** They were very small.

**Chairman Saxton.** And is the gain in February payroll employment statistically significant?

**Commissioner Utgoff.** Yes, it is.

**Chairman Saxton.** How do we account for the slight tick up in the unemployment rate while we see such healthy job growth?

**Commissioner Utgoff.** Household survey and the payroll survey, as you know, come from different sources, and the unemployment rate has to do with participation and a number of other factors so that there can be an increase in the unemployment rate. There really wasn't an increase. It was the same. So that what happened was the employment-to-population ratio stayed the same, and the unemployment rate stayed the same.

I have to say the answer is every month household and payroll series can show differences, and in this month they do that.

**Chairman Saxton.** Of course, I ask you questions, and you say that you can't speculate, but let me just ask one anyway. With the trend in job creation being, now, 5 million jobs since August of 2003, and seeing good job growth this month, I might be able to anticipate some downward trends in the unemployment rate in the months ahead, couldn't I?

**Commissioner Utgoff.** Right. Right. Certainly that is your right.

**Chairman Saxton.** Seasonal adjustment factors affected the February numbers? And if so, which sectors are affected most significantly by these seasonals?

**Commissioner Utgoff.** It is going to take me a minute.

**Mr. Galvin.** It is not really a very seasonal month. Normal seasonal movements are about 600,000 at the total nonfarm level. And the sector with the biggest normal seasonal movement looks to be

education and health services. But we did not see anything unusual from a seasonal perspective this month.

**Chairman Saxton.** And are there any other particular statistical anomalies affecting this month's payroll or household numbers?

**Commissioner Utgoff.** We don't see any.

**Chairman Saxton.** OK. I thank you for being here this morning. We always enjoy it when you come with good news and good numbers. And we will look forward to seeing you in the months ahead. Thank you very much.

[Whereupon, at 9:49 a.m., the Joint Committee was adjourned.]

**FEBRUARY EMPLOYMENT GROWTH**

Commissioner Utgoff, it is a pleasure to welcome you once again to testify before the Joint Economic Committee.

The employment figures released today reflect more good news for American workers. According to the payroll survey, 243,000 jobs were created during the month of February. The level of the diffusion index shows that job gains were widespread last month. According to the household survey, the unemployment rate, at 4.8 percent, was statistically unchanged.

The U.S. economy has created 5 million jobs since August of 2003. The strength of the economy since 2003 has led to sustained job growth and downward pressure on the unemployment rate. The resilience and flexibility of the economy have overcome a number of serious shocks, most recently the hurricanes of last year.

The pick-up in economic growth since 2003 is explained by a rebound in investment activity. The bursting of the stock market and technology bubbles in the first quarter of 2000 had exposed a lot of bad investments. These investments took years to liquefy and had a negative effect on new investment. Falling investment was a drag on economic growth, and undermined the early expansion period.

In 2003, a new policy mix caused a sharp rebound in investment activity. The combination of low interest rates set by the Fed, together with increased tax incentives for investment, led to a sustained upward trend in investment that boosted economic and employment growth. The result is that the economic expansion is healthy and the outlook is good.

In a recent policy report to Congress, the Fed noted that "the U.S. economy delivered a solid performance in 2005." Furthermore, the Fed observed that "The U.S. economy should continue to perform well in 2006 and 2007." The Fed, along with a number of private and government agencies, expects that economic growth in 2006 will be about 3.5 percent. This economic growth will continue to expand employment and further reduce unemployment.

CHAD STONE  
STAFF DIRECTOR

**Opening Statement**  
**Senator Jack Reed**  
**Joint Economic Committee Hearing**  
**March 10, 2006**

Thank you, Chairman Saxton. I want to welcome Commissioner Utgoff and thank her for testifying here today.

Today's report that 243,000 payroll jobs were created in February is welcome news for workers. However, the labor market is not yet back to full strength. During this recovery, the decline in the unemployment rate has not been accompanied by a recovery in labor force participation and strong productivity growth has not translated into rising real wages.

Overall growth in payroll employment has been modest by the standards of most economic recoveries. The five million jobs created since job losses peaked in August 2003 works out to only about 166,000 per month—not much more than what is necessary just to keep up with normal growth in the labor force.

While the jobless rate has come down during the recovery, unemployment remains higher than it was when President Bush took office, long-term unemployment persists, and evidence of hidden unemployment is reflected in the continued depressed levels of the labor force participation rate and the fraction of the population with a job.

Corporate profits and worker productivity have been growing, but wages are not keeping pace with inflation. Average hourly earnings were stagnant during 2003 and have fallen during each of the past two years, after adjusting for inflation. Paychecks are being stretched thinner as families face higher prices for gasoline, home heating, health care, and education.

The ability of the job market to come back after the hurricanes is a testament to the resiliency of the American economy. I am skeptical, however, about the role the President's policies have played in stimulating job growth, and it is clear in the data that ordinary workers are still waiting for the benefits of the economic recovery to show up in their paychecks.

The President doesn't seem well attuned to the concerns of most workers. While he was abroad last week, for example, the President hailed the economic benefits to the U.S. from outsourcing to other countries, but failed to acknowledge that he has no plan to address the effects of outsourcing or other problems that persist in our labor market.

I look forward to Commissioner Utgoff's statement and to a further discussion of the February employment situation.

PREPARED STATEMENT OF HON. KATHLEEN P. UTGOFF, COMMISSIONER,  
DEPARTMENT OF LABOR, BUREAU OF LABOR STATISTICS

Mr. Chairman and Members of the Committee:

I appreciate this opportunity to comment on the employment and unemployment data that we released this morning.

Nonfarm payroll employment rose by 243,000 in February, and the unemployment rate was little changed at 4.8 percent. February's employment increase reflected gains in construction, mining, and several service-providing industries.

Within the goods-producing sector, construction employment increased by 41,000 in February, following another sizeable gain in January. Over the past 12 months, job growth in construction has totaled 346,000. In February, employment continued to rise in mining, mainly in support activities, especially those for oil and gas operations.

Manufacturing employment overall was virtually unchanged in February. There were, however, offsetting movements in several industries. The largest job losses were in motor vehicles and parts and primary metals. Job gains occurred in machinery, petroleum products, and computer and electronic products. The manufacturing workweek (at 41.0 hours) and factory overtime (at 4.6 hours) each rose by 0.1 hour.

Over the month, financial activities added 22,000 jobs, reflecting increases in depository institutions and in insurance carriers. Health care employment expanded by 18,000, with continued growth in hospitals, doctors offices, and home health care. Professional and business services, private education, food services and drinking places, and government also had job gains in February.

Average hourly earnings for private production or nonsupervisory workers rose by 5 cents in February, following increases of 7 cents in both December and January. Over the year, hourly earnings increased by 3.5 percent. The average workweek was down by 0.1 hour in February to 33.7 hours.

Turning to data from the household survey, both the number of unemployed persons (7.2 million) and the unemployment rate (4.8 percent) were little changed over the month. The number of persons unemployed for 27 weeks or more returned to its December level of 1.4 million, after declining in January. These long-term unemployed constituted 19.0 percent of all unemployed persons, down slightly from a year earlier.

Total employment and the labor force continued to trend up in February. However, the employment-population ratio has held steady in recent months, and the labor force participation rate has shown little movement for about 2½ years.

This month, we again report on the labor force status of survey respondents who evacuated from their homes due to Hurricane Katrina. The data are derived from a special set of questions that have been included in the household survey since October to gather information about evacuees. The estimates do not account for all persons who evacuated from their homes due to Hurricane Katrina. Information is not gathered on those evacuees who remain outside the scope of the survey, such as those currently living in hotels or shelters.

The February data indicate that there were about 1 million persons age 16 and over who evacuated from their August residences due to Hurricane Katrina. In February, about one-half of the evacuees were back in the homes they vacated in August. Among Katrina evacuees identified in February, 58.1 percent were in the labor force, and their unemployment rate was 12.6 percent. Unemployment rates were much lower for those evacuees who had returned home (4.8 percent) than for those evacuees who had not (22.6 percent).

To summarize February's labor market data, nonfarm payroll employment rose by 243,000, and the unemployment rate was little changed at 4.8 percent. Payroll employment has increased by 2.1 million over the year, and the unemployment rate is down by about half a percentage point.

My colleagues and I now would be glad to respond to your questions.

## THE EMPLOYMENT SITUATION: FEBRUARY 2006

Nonfarm payroll employment grew by 243,000 in February, and the unemployment rate was little changed at 4.8 percent, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. Job gains occurred in construction, financial activities, health care, and several other industries.

Chart 1. Unemployment rate, seasonally adjusted,  
March 2003 – February 2006

Chart 2. Nonfarm payroll employment, seasonally adjusted,  
March 2003 – February 2006

### Unemployment (Household Survey Data)

Both the number of unemployed persons, 7.2 million, and the unemployment rate, 4.8 percent, were little changed in February. A year earlier, the number of unemployed was 8.0 million, and the jobless rate was 5.4 percent.

Following a decline in January, the unemployment rate for adult men edged up to 4.2 percent in February. The jobless rates for the other major worker groups—adult women (4.3 percent), teenagers (15.4 percent), whites (4.1 percent), blacks (9.3 percent), and Hispanics (5.5 percent)—showed little or no change over the month. The unemployment rate for Asians was 3.2 percent, not seasonally adjusted. (See tables A-1, A-2, and A-3.)

After declining in January, the number of unemployed persons who had been without a job for 27 weeks or longer returned to its December level of 1.4 million. These long-term unemployed accounted for 19.0 percent of total unemployment in February, down slightly from a year earlier. (See table A-9.)

p = preliminary.

Total Employment and the Labor Force (Household Survey Data)

The civilian labor force and total employment continued to trend up in February. The labor force participation rate was essentially unchanged at 66.1 percent, and the employment-population ratio held at 62.9 percent. (See table A-1.)

Persons Not in the Labor Force (Household Survey Data)

Nearly 1.5 million persons (not seasonally adjusted) were marginally attached to the labor force in February, down from about 1.7 million a year earlier. These individuals wanted and were available for work and had looked for a job sometime in the prior 12 months. They were not counted as unemployed because they had not searched for work in the 4 weeks preceding the survey. Among the marginally attached, there were 386,000 discouraged workers in February, down from 485,000 a year earlier. Discouraged workers were not currently looking for work specifically because they believed no jobs were available for them. The other 1.1 million marginally attached had not searched for work for reasons such as school attendance or family responsibilities. (See table A-13.)

Employment Status of Hurricane Katrina Evacuees (Household Survey Data)

Beginning in October, questions were added to the household survey to identify persons who evacuated from their homes, even temporarily, due to Hurricane Katrina. Data collected through these questions do not account for all evacuees; persons living outside of the scope of the survey—such as those living in hotels or shelters—are not included. The questions were asked of persons in the household survey sample throughout the country, since some evacuees relocated far from the storm-affected areas. An additional question determined whether evacuees had returned to their homes and were living there at the time of the survey. The total number of evacuees estimated from the household survey may change from month to month as people move in and out of the scope of the survey. In addition, because the estimates are obtained from a sample survey, they may vary from month to month due to sampling error.

Information gathered in February showed that about 1.0 million persons age 16 and over had evacuated from where they were living in August due to Hurricane Katrina. These evacuees either had returned to their homes or were living in other residential units covered in the survey in February. About one-half of the evacuees were living in their August 2005 residences. Of all evacuees identified, 58.1 percent were in the labor force in February. The unemployment rate for persons identified as evacuees was 12.6 percent. The rate was much higher for evacuees who were not living in their former homes (22.6 percent) than for those who were at home (4.8 percent). (See table B.)

Industry Payroll Employment (Establishment Survey Data)

Total nonfarm payroll employment rose by 243,000 in February to 134.8 million, seasonally adjusted. Over the year, payroll employment grew by 2.1 million. Construction, mining, and several service-providing industries added jobs. (See table B-1.)

In the goods-producing sector, construction employment increased by 41,000 in February, following a gain of 55,000 in the prior month. Over the year, construction employment has risen by 346,000. Specialty trade contractors added 32,000 jobs over the month. Mining continued its upward trend in February, adding 5,000 jobs. Support activities for mining, particularly those related to oil and gas, accounted for nearly all of the over-the-month gain.

**Table B. Employment status in February 2006 of persons 16 years and over who evacuated from their August residence, even temporarily, due to Hurricane Katrina<sup>1</sup>**

(Numbers in thousands, not seasonally adjusted)

Employment status in February 2006	Total	Residence in February	
		Same as in August	Different than in August
Civilian noninstitutional population .....	1,017	540	478
Civilian labor force .....	591	333	258
Participation rate .....	58.1	61.7	53.9
Employed .....	516	317	200
Employment-population ratio .....	50.8	58.7	41.8
Unemployed .....	74	16	58
Unemployment rate .....	12.6	4.8	22.6
Not in labor force .....	427	207	220

<sup>1</sup> Represents persons in the civilian noninstitutional population age 16 and over who resided in households that were eligible to be selected for the Current Population Survey (CPS). These data are not representative of the total evacuee population because they do not include children or people residing in shelters, hotels, places of worship, or other units outside the scope of the CPS. The total number of evacuees estimated from the CPS may change from month to month as people move in and out of the scope of the survey and because of sampling variability.

NOTE: These data use population controls that have been adjusted to account for interstate moves by evacuees.

Manufacturing employment was about unchanged in February; it has decreased by 48,000 over the year. Over the month, employment gains in machinery, petroleum products, and computer and electronic products were offset by declines in motor vehicles and parts and primary metals.

In the service-providing sector, employment in education and health services rose by 47,000 in February. Health care employment continued to grow, up by 18,000. Job growth occurred in ambulatory health care services (11,000), which includes doctors' offices and home health care, and in hospitals (6,000). Employment in private educational services increased by 23,000.

Financial activities employment grew by 22,000 over the month, following a similar-sized gain in January. Employment in depository institutions and in insurance carriers rose in February, increasing by 4,000 and 6,000, respectively. Over the year, financial activities employment has risen by 169,000.

Employment in food services and drinking places increased by 21,000 in February. Over the year, this industry has added 203,000 jobs. Employment was flat in both wholesale and retail trade in February.

Professional and business services employment continued to trend up in February (39,000). The industry has added 466,000 jobs over the year. Over the month, employment rose by 13,000 in services to buildings and dwellings. Temporary help services employment was little changed over the month.

Weekly Hours (Establishment Survey Data)

The average workweek for production or nonsupervisory workers on private nonfarm payrolls decreased by 0.1 hour to 33.7 hours in February, seasonally adjusted. The manufacturing workweek increased by 0.1 hour to 41.0 hours in February, and factory overtime was up by 0.1 hour to 4.6 hours. (See table B-2.)

The index of aggregate weekly hours of production or nonsupervisory workers on private nonfarm payrolls decreased by 0.1 percent in February to 103.8 (2002=100). The manufacturing index increased by 0.2 percent over the month to 95.5. (See table B-5.)

Hourly and Weekly Earnings (Establishment Survey Data)

Average hourly earnings of production or nonsupervisory workers on private nonfarm payrolls increased by 5 cents in February to \$16.47, seasonally adjusted. This followed increases of 7 cents in both December and January. Average weekly earnings were little changed over the month at \$555.04. Over the year, both average hourly and weekly earnings increased by 3.5 percent. (See table B-3.)

---

The Employment Situation for March 2006 is scheduled to be released on Friday, April 7, at 8:30 A.M. (EDT).

## Explanatory Note

This news release presents statistics from two major surveys, the Current Population Survey (household survey) and the Current Employment Statistics survey (establishment survey). The household survey provides the information on the labor force, employment, and unemployment that appears in the A tables, marked HOUSEHOLD DATA. It is a sample survey of about 60,000 households conducted by the U.S. Census Bureau for the Bureau of Labor Statistics (BLS).

The establishment survey provides the information on the employment, hours, and earnings of workers on nonfarm payrolls that appears in the B tables, marked ESTABLISHMENT DATA. This information is collected from payroll records by BLS in cooperation with state agencies. The sample includes about 160,000 businesses and government agencies covering approximately 400,000 individual worksites. The active sample includes about one-third of all nonfarm payroll workers. The sample is drawn from a sampling frame of unemployment insurance tax accounts.

For both surveys, the data for a given month relate to a particular week or pay period. In the household survey, the reference week is generally the calendar week that contains the 12th day of the month. In the establishment survey, the reference period is the pay period including the 12th, which may or may not correspond directly to the calendar week.

### Coverage, definitions, and differences between surveys

**Household survey.** The sample is selected to reflect the entire civilian noninstitutional population. Based on responses to a series of questions on work and job search activities, each person 16 years and over in a sample household is classified as employed, unemployed, or not in the labor force.

People are classified as *employed* if they did any work at all as paid employees during the reference week; worked in their own business, profession, or on their own farm; or worked without pay at least 15 hours in a family business or farm. People are also counted as employed if they were temporarily absent from their jobs because of illness, bad weather, vacation, labor-management disputes, or personal reasons.

People are classified as *unemployed* if they meet all of the following criteria: They had no employment during the reference week; they were available for work at that time; and they made specific efforts to find employment sometime during the 4-week period ending with the reference week. Persons laid off from a job and expecting recall need not be looking for work to be counted as unemployed. The unemployment data derived from the household survey in no way depend upon the eligibility for or receipt of unemployment insurance benefits.

The *civilian labor force* is the sum of employed and unemployed persons. Those not classified as employed or unemployed are *not in the labor force*. The *unemployment rate* is the number unemployed as a percent of the labor force. The *labor force participation rate* is the labor force as a percent of the population, and the *employment-population ratio* is the employed as a percent of the population.

**Establishment survey.** The sample establishments are drawn from private nonfarm businesses such as factories, offices, and stores, as well as federal, state, and local government entities. *Employees on nonfarm payrolls* are those who received pay for any part of the reference pay period, including persons on paid leave. Persons are counted in each job they hold. *Hours and earnings* data are for private businesses and relate only to production workers in the goods-producing sector and nonsupervisory workers in the service-providing sector. Industries are classified on the basis of their principal activity in accordance with the 2002 version of the North American Industry Classification System.

**Differences in employment estimates.** The numerous conceptual and methodological differences between the household and establishment surveys result in important distinctions in the employment estimates derived from the surveys. Among these are:

- The household survey includes agricultural workers, the self-employed, unpaid family workers, and private household workers among the employed. These groups are excluded from the establishment survey.
- The household survey includes people on unpaid leave among the employed. The establishment survey does not.
- The household survey is limited to workers 16 years of age and older. The establishment survey is not limited by age.
- The household survey has no duplication of individuals, because individuals are counted only once, even if they hold more than one job. In the establishment survey, employees working at more than one job and thus appearing on more than one payroll would be counted separately for each appearance.

### Seasonal adjustment

Over the course of a year, the size of the nation's labor force and the levels of employment and unemployment undergo sharp fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays, and the opening and closing of schools. The effect of such seasonal variation can be very large; seasonal fluctuations may account for as much as 95 percent of the month-to-month changes in unemployment.

Because these seasonal events follow a more or less regular pattern each year, their influence on statistical trends can be eliminated by adjusting the statistics from month to month. These adjustments make nonseasonal developments, such as declines in economic activity or increases in the participation of women in the labor force, easier to spot. For example, the large number of youth entering the labor force each June is likely to obscure any other changes that have taken place relative to May, making it difficult to determine if the level of economic activity has risen or declined. However, because the effect of students finishing school in previous years is known, the statistics for the current year can be adjusted to allow for a comparable change. Insofar as the seasonal adjustment is made correctly, the adjusted figure provides a more useful tool with which to analyze changes in economic activity.

Most seasonally adjusted series are independently adjusted in both the household and establishment surveys. However, the ad-

justed series for many major estimates, such as total payroll employment, employment in most supersectors, total employment, and unemployment are computed by aggregating independently adjusted component series. For example, total unemployment is derived by summing the adjusted series for four major age-sex components; this differs from the unemployment estimate that would be obtained by directly adjusting the total or by combining the duration, reasons, or more detailed age categories.

For both the household and establishment surveys, a concurrent seasonal adjustment methodology is used in which new seasonal factors are calculated each month, using all relevant data, up to and including the data for the current month. In the household survey, new seasonal factors are used to adjust only the current month's data. In the establishment survey, however, new seasonal factors are used each month to adjust the three most recent monthly estimates. In both surveys, revisions to historical data are made once a year.

#### Reliability of the estimates

Statistics based on the household and establishment surveys are subject to both sampling and nonsampling error. When a sample rather than the entire population is surveyed, there is a chance that the sample estimates may differ from the "true" population values they represent. The exact difference, or *sampling error*, varies depending on the particular sample selected, and this variability is measured by the standard error of the estimate. There is about a 90-percent chance, or level of confidence, that an estimate based on a sample will differ by no more than 1.6 standard errors from the "true" population value because of sampling error. BLS analyses are generally conducted at the 90-percent level of confidence.

For example, the confidence interval for the monthly change in total employment from the household survey is on the order of plus or minus 430,000. Suppose the estimate of total employment increases by 100,000 from one month to the next. The 90-percent confidence interval on the monthly change would range from -330,000 to 530,000 (100,000 +/- 430,000). These figures do not mean that the sample results are off by these magnitudes, but rather that there is about a 90-percent chance that the "true" over-the-month change lies within this interval. Since this range includes values of less than zero, we could not say with confidence that employment had, in fact, increased. If, however, the reported employment rise was half a million, then all of the values within the 90-percent confidence interval would be greater than zero. In this case, it is likely (at least a 90-percent chance) that an employment rise had, in fact, occurred. At an unemployment rate of around 5.5 percent, the 90-percent confidence interval for the monthly change in unemployment is about +/- 280,000, and for the monthly change in the unemployment rate it is about +/- .19 percentage point.

In general, estimates involving many individuals or establishments have lower standard errors (relative to the size of the estimate) than estimates which are based on a small number of observations. The precision of estimates is also improved when the data are cumulated over time such as for quarterly and annual averages. The seasonal adjustment process can also improve the stability of the monthly estimates.

The household and establishment surveys are also affected by *nonsampling error*. Nonsampling errors can occur for many reasons, including the failure to sample a segment of the population, inability to obtain information for all respondents in the sample, inability or unwillingness of respondents to provide correct information on a timely basis, mistakes made by respondents, and errors made in the collection or processing of the data.

For example, in the establishment survey, estimates for the most recent 2 months are based on incomplete returns; for this reason, these estimates are labeled preliminary in the tables. It is only after two successive revisions to a monthly estimate, when nearly all sample reports have been received, that the estimate is considered final.

Another major source of nonsampling error in the establishment survey is the inability to capture, on a timely basis, employment generated by new firms. To correct for this systematic underestimation of employment growth, an estimation procedure with two components is used to account for business births. The first component uses business deaths to impute employment for business births. This is incorporated into the sample-based link relative estimate procedure by simply not reflecting sample units going out of business, but imputing to them the same trend as the other firms in the sample. The second component is an ARIMA time series model designed to estimate the residual net birth/death employment not accounted for by the imputation. The historical time series used to create and test the ARIMA model was derived from the unemployment insurance universe micro-level database, and reflects the actual residual net of births and deaths over the past five years.

The sample-based estimates from the establishment survey are adjusted once a year (on a lagged basis) to universe counts of payroll employment obtained from administrative records of the unemployment insurance program. The difference between the March sample-based employment estimates and the March universe counts is known as a benchmark revision, and serves as a rough proxy for total survey error. The new benchmarks also incorporate changes in the classification of industries. Over the past decade, the benchmark revision for total nonfarm employment has averaged 0.2 percent, ranging from less than 0.05 percent to 0.4 percent.

#### Additional statistics and other information

More comprehensive statistics are contained in *Employment and Earnings*, published each month by BLS. It is available for \$27.00 per issue or \$53.00 per year from the U.S. Government Printing Office, Washington, DC 20402. All orders must be prepaid by sending a check or money order payable to the Superintendent of Documents, or by charging to Mastercard or Visa.

*Employment and Earnings* also provides measures of sampling error for the household and establishment survey data published in this release. For unemployment and other labor force categories, these measures appear in tables 1-B through 1-D of its "Explanatory Notes." For the establishment survey data, the sampling error measures and the actual size of revisions due to benchmark adjustments appear in tables 2-B through 2-F of *Employment and Earnings*.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone: 1-800-877-8339.

## HOUSEHOLD DATA

Production occupations	9,446	9,248	770	684	7.5	6.9
Transportation and material moving occupations	8,752	8,607	674	683	7.2	7.4

<sup>1</sup> Persons with no previous work experience and persons whose last job was in the Armed Forces are included in the unemployed total.  
NOTE: Beginning in January 2006, data reflect revised population controls used in the household survey.

Table A-11. Unemployed persons by industry and class of worker, not seasonally adjusted

Industry and class of worker	Number of unemployed persons (in thousands)		Unemployment rates	
	Feb. 2005	Feb. 2006	Feb. 2005	Feb. 2006
Total, 16 years and over <sup>1</sup>	8,549	7,692	5.8	5.1
Nonagricultural private wage and salary workers	6,964	6,161	6.1	5.3
Mining	25	25	4.0	3.8
Construction	1,150	836	12.3	8.6
Manufacturing	889	821	5.3	4.9
Durable goods	532	477	5.1	4.4
Nondurable goods	357	344	5.9	5.7
Wholesale and retail trade	1,301	1,141	6.2	5.4
Transportation and utilities	245	260	4.4	4.6
Information	204	119	6.5	3.7
Financial activities	301	268	3.2	2.8
Professional and business services	916	841	7.2	6.5
Education and health services	619	528	3.4	2.8
Leisure and hospitality	1,008	1,040	8.8	9.1
Other services	325	281	5.3	4.4
Agriculture and related private wage and salary workers	107	139	9.9	11.8
Government workers	472	472	2.3	2.3
Self-employed and unpaid family workers	363	332	3.4	3.1

<sup>1</sup> Persons with no previous work experience are included in the unemployed total.  
NOTE: Beginning in January 2006, data reflect revised population controls used in the household survey.

## HOUSEHOLD DATA

Table A-12. Alternative measures of labor underutilization

(Percent)

Measure	Not seasonally adjusted			Seasonally adjusted					
	Feb. 2005	Jan. 2006	Feb. 2006	Feb. 2005	Oct. 2005	Nov. 2005	Dec. 2005	Jan. 2006	Feb. 2006
U-1 Persons unemployed 15 weeks or longer, as a percent of the civilian labor force .....	2.1	1.6	1.8	1.9	1.7	1.7	1.6	1.5	1.6
U-2 Job losers and persons who completed temporary jobs, as a percent of the civilian labor force .....	3.0	2.7	2.6	2.6	2.3	2.3	2.3	2.2	2.2
U-3 Total unemployed, as a percent of the civilian labor force (official unemployment rate) .....	5.8	5.1	5.1	5.4	4.9	5.0	4.9	4.7	4.8
U-4 Total unemployed plus discouraged workers, as a percent of the civilian labor force plus discouraged workers .....	6.1	5.4	5.4	5.7	5.2	5.3	5.2	4.9	5.0
U-5 Total unemployed, plus discouraged workers, plus all other marginally attached workers, as a percent of the civilian labor force plus all marginally attached workers .....	6.8	6.1	6.1	6.4	5.8	5.9	5.9	5.7	5.7
U-6 Total unemployed, plus all marginally attached workers, plus total employed part time for economic reasons, as a percent of the civilian labor force plus all marginally attached workers .....	9.9	9.2	9.0	9.3	8.6	8.7	8.6	8.4	8.5

NOTE: Marginally attached workers are persons who currently are neither working nor looking for work but indicate that they want and are available for a job and have looked for work sometime in the recent past. Discouraged workers, a subset of the marginally attached, have given a job-market related reason for not currently looking for a job. Persons employed part time for economic reasons are those who want and are available for full-time work but

have had to settle for a part-time schedule. For further information, see "BLS introduces new range of alternative unemployment measures," in the October 1995 issue of the *Monthly Labor Review*. Beginning in January 2006, data reflect revised population controls used in the household survey.

Table A-13. Persons not in the labor force and multiple jobholders by sex, not seasonally adjusted

(Numbers in thousands)

Category	Total		Men		Women	
	Feb. 2005	Feb. 2006	Feb. 2005	Feb. 2006	Feb. 2005	Feb. 2006
<b>NOT IN THE LABOR FORCE</b>						
Total not in the labor force .....	77,332	76,077	29,648	29,900	47,744	46,177
Persons who currently want a job .....	4,844	4,800	2,123	2,071	2,716	2,729
Searched for work and available to work now <sup>1</sup> .....	1,673	1,471	838	784	835	687
Reason not currently looking:						
Discouragement over job prospects <sup>2</sup> .....	485	386	268	237	218	149
Reasons other than discouragement <sup>3</sup> .....	1,187	1,085	571	546	617	538
<b>MULTIPLE JOBHOLDERS</b>						
Total multiple jobholders <sup>4</sup> .....	7,667	7,437	3,867	3,731	3,800	3,706
Percent of total employed .....	5.5	5.2	5.2	4.9	5.6	5.6
Primary job full time, secondary job part time .....	3,882	3,899	2,207	2,171	1,675	1,728
Primary and secondary jobs both part time .....	1,746	1,700	586	505	1,160	1,195
Primary and secondary jobs both full time .....	274	302	158	202	116	100
Hours vary on primary or secondary job .....	1,703	1,503	889	839	815	664

<sup>1</sup> Data refer to persons who have searched for work during the prior 12 months and were available to take a job during the reference week.

<sup>2</sup> Includes those who did not actively look for work in the prior 4 weeks for such reasons as school or family responsibilities, ill health, and transportation problems, as well

as a small number for which reason for nonparticipation was not determined.

<sup>4</sup> Includes persons who work part time on their primary job and full time on their secondary job(s), not shown separately.

NOTE: Beginning in January 2006, data reflect revised population controls used in the household survey.

## ESTABLISHMENT DATA

<sup>1</sup> Data relate to production workers in natural resources and mining and manufacturing, construction workers in construction, and nonsupervisory workers in the service-providing industries. These groups account for approximately four-fifths of the

total employment on private nonfarm payrolls.

<sup>2</sup> Includes motor vehicles, motor vehicle bodies and trailers, motor vehicle parts.  
P = preliminary.

<sup>1</sup> See footnote 1, table B-2.<sup>2</sup> Includes motor vehicles, motor vehicle bodies and trailers, and motor vehicle parts.  
P = preliminary.

NOTE: The indexes of aggregate weekly hours are calculated by

dividing the current months estimates of aggregate hours by the corresponding 2002 annual average levels. Aggregate hours estimates are the product of estimates of average weekly hours and production or nonsupervisory worker employment.

## ESTABLISHMENT DATA

Table B-6. Indexes of aggregate weekly payrolls of production or nonsupervisory workers<sup>1</sup> on private nonfarm payrolls by industry sector and selected industry detail

(2002=100)
